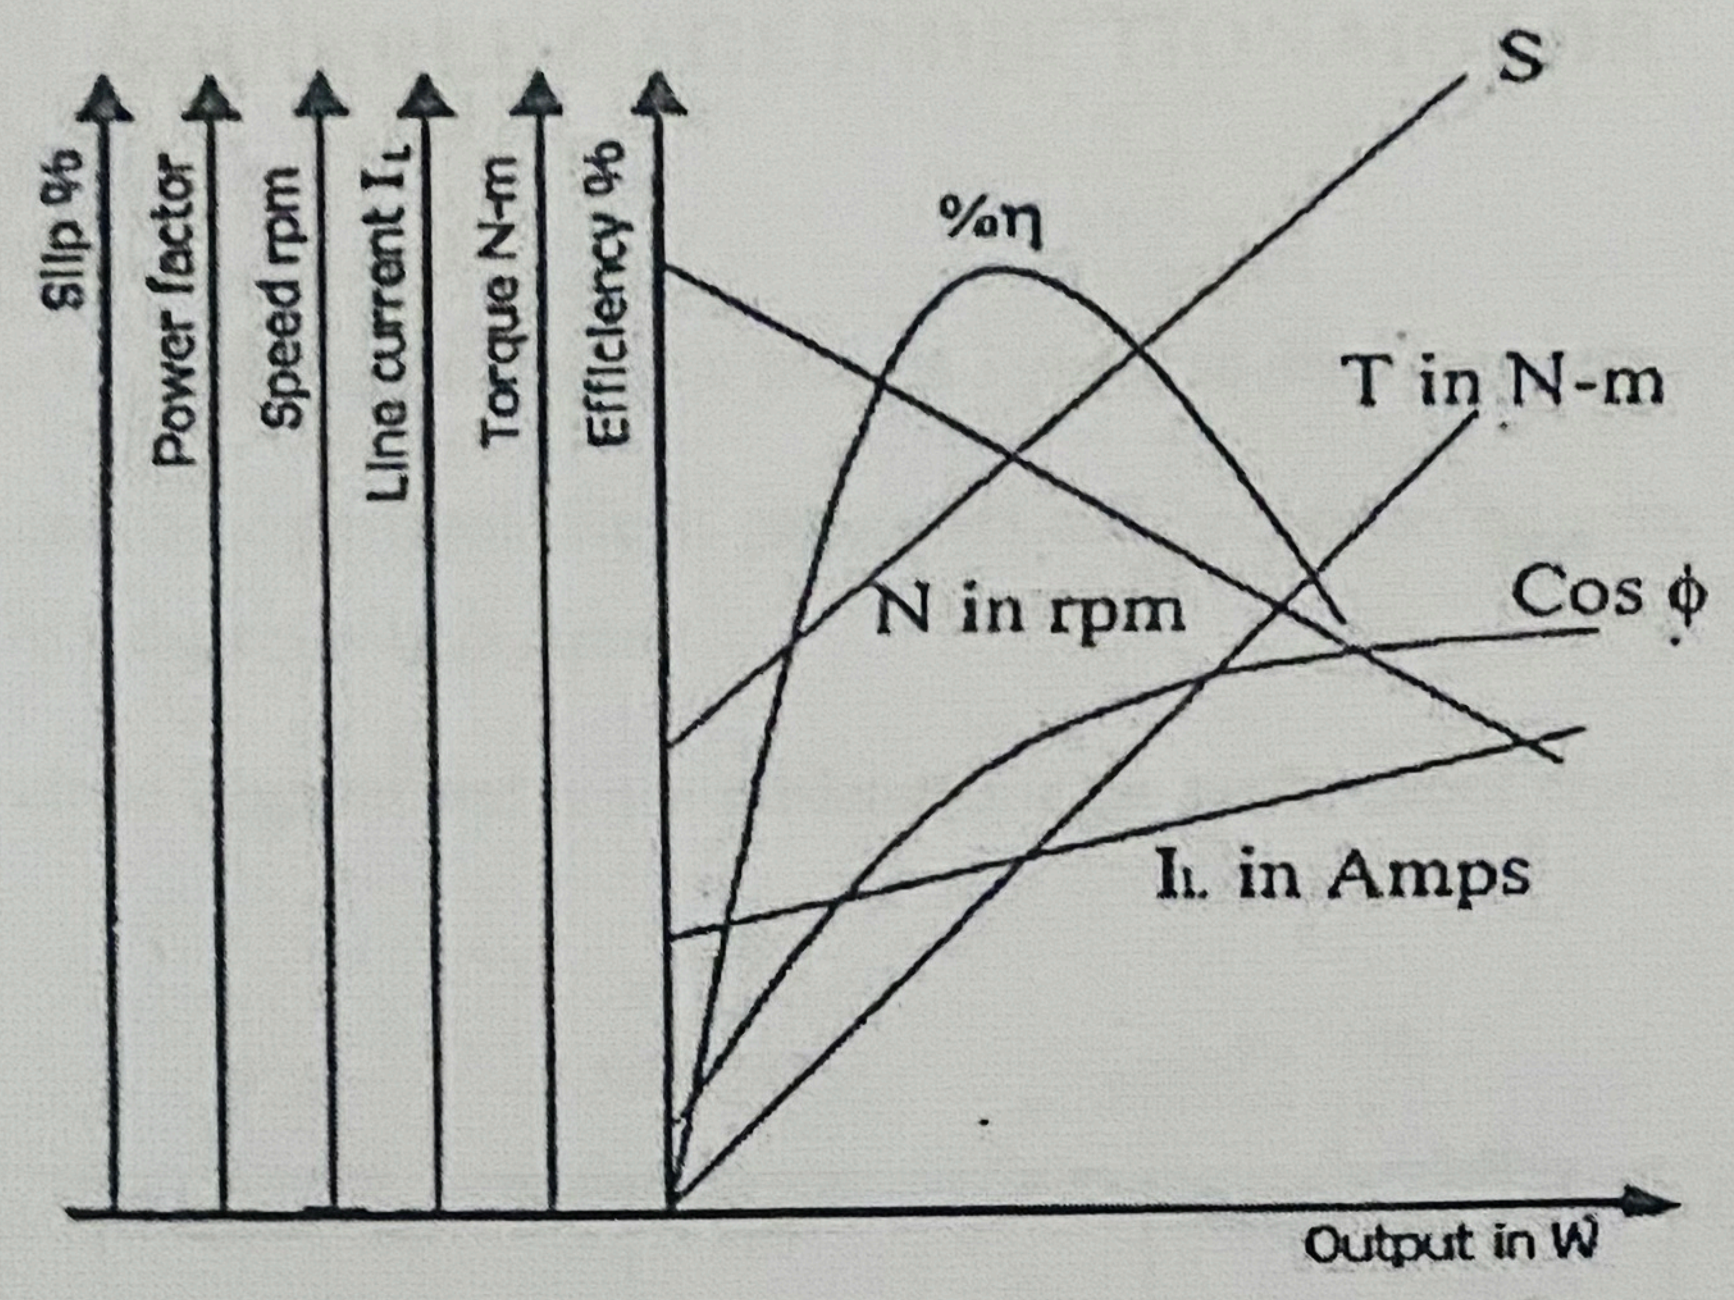
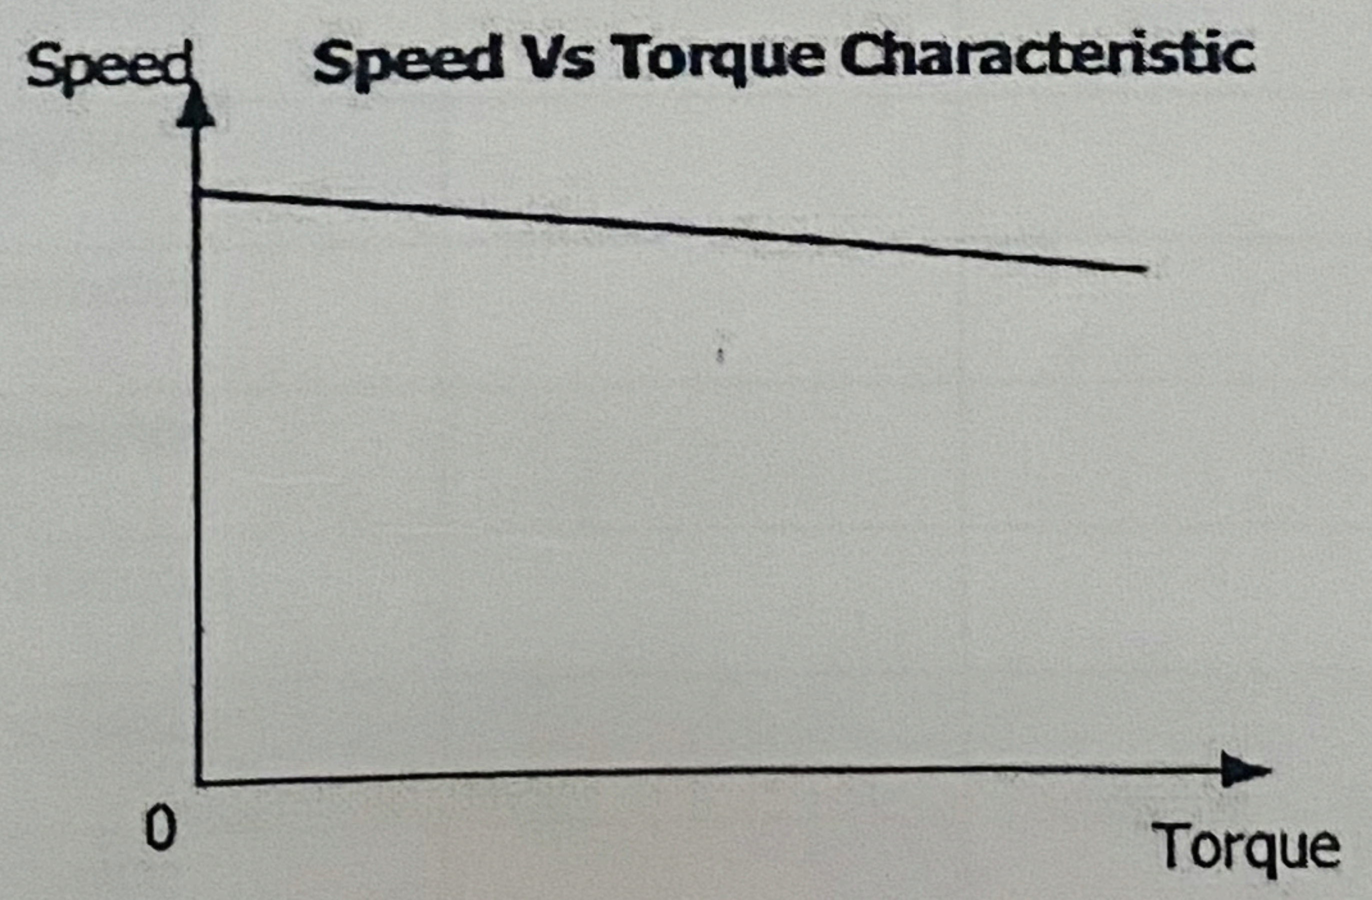
Value of capacitance required to improve the power factor = $\frac{KVAR \times 1000}{\omega V^2}$

$$= \frac{KVAR \times 1000}{2\pi f V^2} =$$

MODEL GRAPHS





RESULT

- Brake test conducted on 3 phase squirrel cage induction motor
- Performance characteristics plotted
  - Additional kVAR required and the value of capacitance to improve the power factor for each load to 0.95 determined.
