

Sahrdaya College of Engineering and Technology, Kodakara
Answer Key
APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY
Third Semester B.Tech Degree Examination December 2021 (2019 scheme)
Course Code: HUT 200
Max Marks:100
Course Name: Professional Ethics

PART-A

1. Define empathy. What is the difference between empathy and sympathy?

Ans: Empathy is the ability to emotionally understand what other people feel, see things from their point of view, and imagine yourself in their place. Essentially, it is putting yourself in someone else's position and feeling what they must be feeling.

Sympathy

- *Ability to identify and understand Another person's situations and and pity
- *Can understand another's situation
- *May have similar experience in the past
- *Understanding and acceptance are evoked

Empathy

- *Feelings of sorrow
- Feelings for someone else's misfortune
- *Cannot understand another's situation
- *Does not have similar experience
- *Pity, sorrow and concerns evoked

2. What is a civic virtue and how is it related to respect for others?

Ans:

*Civic virtue is morality or a standard of righteous behavior in relationship to a citizen's involvement in society.

*Civic virtue is the behaviour of good citizens. it includes voting, obeying rules and laws, Serving on juries and Responsibility.

*Civic virtue is putting the needs of the country and its citizens above one's personal desires/wants.

*In general, respect means valuing one's colleague for their professional expertise and their devotion to the social goods. Civic virtue demands we understand how to respect the office rather than just the office holder.

Eg: *Integrity

*Honesty

*Fairness

*Voting

*Acceptance

*Open – Mindedness

- *Selflessness
- *Empathy
- *Courage

3.Compare and contrast tradition and custom.Give an example

Custom

*Custom is a usage or practice common to many or to a particular Place or group of people. Passed on in this way.

*Custom can be a new practice,A way Of behaving or doing things Part of the culture.

*Custom,if passed down for generations Can become a tradition

*Eg: members of a certain family can have a party on a certain day of the individuals Year If this practice is followed For many years by several generations, This can turn to a family tradition.

Tradition

*Tradition is the transmission of customs or beliefs from generations. To generation or the fact of being Passed on in this way.

*Tradition is always a custom that has been passed down for years , it is an Culture.

*Tradition is a custom that have been transmitted through generations. Some tradition are unique to some families

*Eg:if we look at the history of the Christmas traditions, Christmas trees Were traditionally decorated with edibles like Apples and nuts; it was in the 18th century That it began to be illuminated by candles .Today Christmas trees are decorated with electric Lights and various ornaments.

4.Explain Normative Senses.

Ans: *Normativity is the phenomenon in human societies of designating some actions or outcomes as good, desirable, or permissible, and others as bad, undesirable, or impermissible.

*Normative ethics is the study of ethical action.Analyses how people ought to act.

*It attempts to evaluate or create moral standards and prescribe how people ought to act

*it attempts to discover which actions are in fact right or wrong,which things are in fact good or bad, and what it takes to in fact be a good or bad person.

5.Why are codes of ethics important?

Ans:

*A code of ethics is important because it clearly lays out the rules for behavior and provides the groundwork for a preemptive warning.

*A code of ethics sets out an organization's ethical guidelines and best practices to follow for honesty, integrity, and professionalism.

*For members of an organization, violating the code of ethics can result in sanctions including termination.

*In some industries, including banking and finance, specific laws govern business conduct. In others, a code of ethics may be voluntarily adopted.

*The main types of codes of ethics include a compliance-based code of ethics, a value-based code of ethics, and a code of ethics among professionals.

*A focus on climate change has become an integral part of companies' codes of ethics, detailing their commitment to sustainability.

6.Explain the term “balanced outlook on law”

Ans:*The ‘balanced outlook on law’ in engineering practice Stresses the necessity of laws and regulations and also their Limitations in directing and controlling the engineering Practice.

* Laws are needed to provide a minimum level of compliance.

*To live in harmony in the society, one should learn to maintain a balance between individual needs and collective needs of the society.

*The ethical conduct which can maintain such balance, can be applied with the help of laws. Laws are important as the people are not completely responsible and because of the competitive nature of the free enterprise system which does not encourage moral initiative.

7.What is confidentiality and why is it needed.

Ans:*Confidentiality is that practice which helps to keep all information secret. It is a trade secret.

Confidentiality is needed because:

*The maintenance of secrecy refers to the unrevealing of any data concerning the company's business or technical processes that are not already in public knowledge.

*Every company has some knowledge and can identify the individuals and groups that might have access to a particular set of information.

*The members of such groups share the responsibility of maintaining confidentiality.

8.Explain collegiality and loyalty.

Ans:Collegiality:

*Collegiality is the term that describes a work environment where responsibility and authority are shared among the colleagues.

*Collegiality is the tendency to support and Cooperate with the colleagues. It is a virtue Essential for the team work to be effective.

• Collegiality is the relationship between Colleagues. It consists of respect, commitment And connectedness.

Loyalty:

*Loyalty is a devotion and faithfulness to a nation, Cause, philosophy, country, group, or person

*Loyalty is the faithful adherence to an organization And the employer.

*Two types of loyalty are Agency loyalty and Attitude Loyalty.

9.What is environmental ethics?

Ans:*Environmental Ethics deal with issues related to the rights of individuals that are fundamental to life and well-being.

*These concern not only the needs of each person today, but also those who will come after us.

*It also deals with the rights of others living creatures that inhabit the Earth.

*Engineers need to show some responsibility towards the environment and should be ethical in their approach and find mitigating solutions for the protection of environment.

*The environment ethics include –

a)The study of moral issues concerning the environment

b) Moral perspectives, beliefs and attitudes concerning those issues.

10.Justify the need of moral leadership in today's business environment?

Ans:Moral leadership is essentially required for the engineers because:

*It is leading a group of people towards the achievement of global and objectives. The goals as well as the means are to be moral.

*The leadership shall direct and motivate the group to move through morally desirable ways.

*They lead by thinking ahead in time, and morally creative towards new applications, extension and putting values into practice.

*The engineers can help in guiding, organizing, and stimulating the community towards morally and environmentally desirable goals.

PART-B

11 a)

Caring involves feelings, relationship, contends with other persons and protecting others and causing least damage to others. Sharing means sharing of feelings, ideas thoughts, resources and profits.

Caring in the workplace for employees improves employee experience, brand reputation, retention of talent, organisational progress and employee productivity. Why? It is simple, employees are people; they are individuals powered by emotions. When we feel cared for, we give back, we are more invested, we also care more.

This might include ensuring management is checking in on their teams regularly asking how their reports are – and then really listening to their answer. Such a simple, small act can result in huge positive consequences. Of course, more traditional ways in which employers show care, via their remuneration packages or benefits, their social events or access to further training. However, more can be done. A more holistic view on an employee's life cycle will reveal further opportunities to support.

Sharing is always mutually beneficial. Sharing morally acceptable feelings, resources and materials is a value.

Knowledge sharing is a process through which employees can easily share their knowledge, experiences, observations with everyone in the organization. This knowledge is shared on a common platform like a knowledge base so that employees across departments can access it anytime they need it.

When knowledge is instantly available, employees are able to be their productive best and work to the best of their abilities. No more wasting time scrambling for information across emails or folders and no more shoulder taps.

Sharing and managing knowledge enables better decision-making, higher productivity, and improved performance. It also spurs innovation as employees have all the necessary information at their fingertips to think out of the box and bring a real change to your organization.

b) Integrity,

A person can be said to have integrity when they have strong ethical and moral principles and adhere to these even when they are not under public scrutiny.

Integrity is a valuable trait to have in the workplace and one that employers prize in their employees. A company that has employees who value integrity is likely to have a professional and reliable work culture. The employees in the company are more likely to have a good working relationship with their employers and also among themselves. They will be respectful of each other, will be highly motivated at work and will consequently be more productive.

Honesty

To have integrity, you must strive to be honest in your personal and professional relationships. You must be honest about your talents and shortcomings.

Trustworthiness

Following through on what you have promised or committed to is an important part of having integrity. People will trust you if they know they can depend on you to do what you have said you will do.

Responsibility

As a person with integrity, you must take responsibility for your behaviour and your work commitments. You must watch what you say and how you treat other people. You must show consideration for other people's ideas and opinions.

Patience

A person with integrity will strive to cultivate patience and tolerance. By learning how to stay calm and collected in the face of setbacks, you will be able to find ways to overcome the challenges and obstacles that you encounter in your personal and professional dealings

Helpfulness

When you have integrity, you tend to have a selfless and helpful outlook towards the world. You will be more willing to assist people in need without always expecting something in return. You will not mind covering for your colleagues if they have to remain absent from work due to an emergency. You will be generous about helping out with your time and ideas when working together.

Whatever your work position or department, exercising integrity in the workplace is of utmost importance for the future of your career and the company's long-term well-being. By behaving with integrity in the workplace, you can count on improving your relationships with your superiors and colleagues. The work environment will be better, with higher levels of work motivation and productivity amongst the employees.

1. Show up on Time and Work Your Hours
2. Be Ready to Do Work
3. Do Not Make Promises You Cannot Keep (and Keep the Ones You Do)
4. Be Honest About Your Shortcomings
5. Deal With Conflict Professionally
6. Take Responsibility for Your Actions
7. Uphold Confidentiality
8. Set a Good Example and Lead by Example
9. Stand up for What's Right (Even if It Means Rocking the Boat)
10. Be Accountable

12

a) Cooperation is not always an easy thing to achieve in the workplace, but the effort is worth it because it leads to a harmonious and productive space. Cooperation can make the difference between success and failure for many businesses. When employees dedicate more time to their duties in a cooperative workplace, they are more productive and things get done more quickly and efficiently. Valuable time is not lost resolving bickering and conflict between employees and management when there is cooperation at the workplace.

Teamwork is a mark of cooperation at the workplace. 'Teamwork makes the dream work' says author John C. Maxwell. In a cooperation-rich workplace, individuals will voluntarily engage in open discussion. Management and employees work together and try to keep arguments to a minimum.

It takes empathy and skill, to bring a group of employees to cooperate and come together as a team. The basic role of a leader is to inspire. If you are a leader, in any sense, never forget the influence you have on others. As a boss, supervisor or leader, your attitude affects your employees and co-workers. Remember, that as your attitude affects your employees, in turn their attitudes affect your customers. And, as we all know, your customers are the lifeblood of your business.

Commitment :

Commitment is a deeply held belief that, once you have agreed to do something, you must do it until it is finished or completed. A strong commitment ethic leads to success. Whether you are a student, an employee or a stay at home mom—you've probably set personal goals for yourself. These goals can be reached only when a high enough level of commitment has been made.

10 Steps to Commitment Ethic

1. Accept your current situation. Denying that anything is wrong or trying to cover up a problem will not help. You must accept the situation before anything can happen to make things better.
2. Talk to others who have succeeded. You cannot do it alone. It's always best to talk to others who have gone down the same road you have. Learn from their experiences.
3. Stay healthy. Without your health, you have nothing. Exercise, rest, relax, eat well—all of these things need to be done in order to keep a commitment.
4. Face reality. Take a good, long look at the situation before you commit. It is always best to approach any commitment with your eyes open.
5. Accept your responsibility. Before you make a commitment, you have to fully understand who is responsible for reaching a goal. If it is not your duty or responsibility, pass it on to the one who is responsible.
6. Control your self-talk. Self-talk will either help you or prevent you from getting your commitment. Learn to talk yourself into rather than out of a goal.
7. Get some help. Research has shown over and over that people who have help from others tend to keep their commitments and reach their goals more often than those who go it alone.
8. Set your goals and setup a tracking process. You know how to set and reach goals. Now take that knowledge and make it happen.
9. Learn to handle setbacks. Along the way, after you have made your commitment, you will encounter many problems and challenges. Commitments may even need to be changed based on things that have changed since the beginning of the commitment.
10. Persist. Persist. Persist. There is no other word to put here. Remember, persistence beats resistance every time.

b) Social expectations are defined as implicit rules that govern one's reactions and beliefs in a way that is deemed acceptable by society. Social expectations are not just dependent on the individual but also on culture, religion, age group, class, and location. The social expectations for an adolescent vs. an adult are very different; the same goes for groups of different cultural backgrounds regardless of if they are in the same age range.

According to American psychologist Lawrence Kohlberg, there are three levels of moral development. These include pre-conventional morality, conventional morality, and post-conventional morality.

The first level of moral development is pre-conventional morality. This stage continues until a child is approximately around age nine. During this stage, children have not developed their moral compass. They are shaped by the reactions of the adults around them; this is when punishment and reward play a significant role in the moral decision-making of a child. When children see that they are being punished for a behavior, they associate it with something bad and are less inclined to repeat it.

The second level of moral development is conventional morality. At this level, individuals base their morals on society's depiction of right and wrong.

13 a) Professionalism means the conduct, behavior and attitude of someone in a work setting or business environment. It's a component of work ethics that's reflective of an individual's consideration of others. It leads to lasting professional relationships, a strong professional reputation and workplace success.

b) An important element of professionalism is one's motive for working. There are several distinct possible motives; some are good and proper while others are not.

A good motive usually leads not only to work that is well done and of real service to others, but also tends to be more personally fulfilling for the professional. Hence it is important to reflect on one's motive in working.

The primary motive for professional work should be service to others.

Each professional has a certain expertise which he exercises for others. Doctors, lawyers, engineers, teachers all dedicate their time and energies to helping other people.

Models For Professional Engineers :

Promotion of public good is the primary concern of the professional engineers. There are several role models to whom the engineers are attracted. These models provoke their thinking, attitudes and actions.

1. Savior

The engineer as a savior, save the society from poverty, illiteracy, wastage, inefficiency, ill health, human (labor) dignity and lead it to prosperity, through technological development and social planning.

For example, R.L. Stevenson.

2. Guardian

He guards the interests of the poor and general public. As one who is conversant with technology development, is given the authority befitting his expertise to determine what is best suited to the society.

For example, Lawrence of Arabia (an engineer).

3. Bureaucratic Servant

He serves the organization and the employers. The management of an enterprise fixes its goals and assigns the job of problem solving to the engineer, who accepts the challenge and shapes them into concrete achievements.

For example, Jamshedji Tata.

4. Social Servant

It is one who exhibits social responsibility. The engineer translates the interest and aspirations of the society into a reality, remembering that his true master is the society at large.

For example, Sir M. Viswesvarayya.

5. Social Enabler and Catalyst

One who changes the society through technology. The engineer must assist the management and the society to understand their needs and make informed decisions on the desirable technological development and minimize the negative effects of technology on people and their living environment. Thus, he shines as a social enabler and a catalyst for further growth.

For example, Sri Sundarlal Bahuguna.

6. Game Player

He is neither a servant nor master. An engineer is an assertive player, not a passive player who may carry out his master's voice. He plays a unique role successfully within the organization, enjoying the excitement of the profession and having the satisfaction of surging ahead in a competitive world.

For example, Narayanamurthy, Infosys and Dr. Kasthurirangan, ISRO.

14

- a) Kohlberg's theory of moral development is a theory that focuses on how children develop morality and moral reasoning.

Kohlberg's theory suggests that moral development occurs in a series of six stages. The theory also suggests that moral logic is primarily focused on seeking and maintaining justice.

Levels :

1. Preconventional Morality
 2. Conventional Morality
 3. Postconventional Morality
- (each level consist of 2 stages)

Gilligan proposed that women come to prioritize an “ethics of care” as their sense of morality evolves along with their sense of self while men prioritize an “ethics of justice.”

CONTRAST

Kohlberg observed that most people won't reach the highest stages of his scale but would stop developing morally in the middle stages at the Conventional Level, and that's exactly what research showed.

While both girls and boys tended to score at the Conventional Level on Kohlberg's scale, girls scored predominantly at Stage 3

This made it seem like men reached higher levels of morality than women.

But Gilligan noted that Kohlberg's theory was formulated exclusively through research with young white males.

As a result, she suggested that Kohlberg's theory is biased towards men and boys and doesn't account for women and girls' perspectives on morality.

Moreover, some have expressed concern over Gilligan's suggestion that women emphasize care and connection more than men, arguing that this reinforces traditional ideas about femininity while potentially continuing to push women into caregiver roles.

15

what are the different roles and functions of “code of ethics”?

a) The engineering societies such as AAES, ABET, NSPE, IEEE and AICTE have framed these codes of ethics which are helpful to engineers to strengthen the moral issues on their work. The codes of ethics play at least eight important roles such as the following:

1) Serving and protecting the public – Engineers are in a responsible position where trust and trustworthiness, both are essential. A code of ethics functions as a commitment by the profession as a whole that engineers will serve the public health, safety and welfare.

2) Guidance – Codes are written in brief yet prove effective in offering general guidance to the engineers. More specific directions may be given in supplementary statements or guidelines, which tell how to apply the code. If needed, the assistance is obtained for further specification.

3) Inspiration – Codes of ethics, which specify a collective commitment towards a profession, help in motivating the engineers towards ethical conduct. Actually, these codes make one feel really responsible and proud to be a professional thus motivating towards the commitment one should have towards one's profession.

4) Shared Standards – The standards established should be applicable to all individuals, in their particular professions. With the codes of ethics, the public is assured of engineers with minimum standard of excellence and the professionals are provided a fair way to compete.

5) Support for Responsible Professionals – The professionals who act ethically have more positive support through these codes. A professional engineer who has the intention to stand by the codes of ethics, can have no harm from immoral professional obligations, as he can reject smoothly yet formally. As well, these codes can provide legal support for engineers criticized for living up to work-related professional obligations.

6) Education and Mutual understanding – The codes which are widely circulated and officially approved by professional societies, promote a shared understanding among professionals, the public and government organizations about the moral responsibilities of engineers. These codes prompt discussion and reflection on moral issues.

7) Deterrence and Discipline – The professionals who fail to follow the codes exhibit unethical conduct, which is evident from the disobedience towards their profession. Such an investigation generally requires paralegal proceedings designed to get at the truth about a given charge without violating the personal rights of those being investigated. This might lead to expulsion of those whose professional conduct has been proven unethical, which also leads to loss of respect from colleagues and the local community.

8) Contributing to the Profession's Image – Codes project the engineers as the professionals of ethically committed profession, which inspires them to work with great Commitment and more effectively to serve the public. It can also win greater powers of self-regulation for the profession itself, while lessening the demand for more government regulation.

16

Explain the Bhopal gas tragedy. Discuss the violations of moral, ethics, and professional codes of standard in it.

a) Bhopal's Gas tragedy is the world's worst industrial disaster that occurred in 1984, due to the gas leakage from a pesticide production plant, The Union Carbide India Limited (UCIL) located in Bhopal, Madhya Pradesh.

It was believed that slack management and deferred maintenance together created a situation where routine pipe maintenance caused a backflow of water into the MIC tank, triggering the disaster.

On December 3rd, 1984, a rolling wind carried a poisonous gray cloud from the Union Carbide Plant in Bhopal, Madhya Pradesh of India. The poisonous gas released was 40 tons of Methyl Iso Cyanate (MIC). This particular gas is very toxic that leaked and spread throughout the city.

The residents of the city, woke up to the clouds of suffocating gas and struggled to breathe. They started running desperately through the dark streets. The victims arrived at hospitals, breathless and blind.

The people who survived had their lungs, brain, eyes, muscles affected severely. Their gastro intestinal system, neurological, reproductive and immune systems were also dangerously affected. By the morning, the roads were all filled with dead bodies of humans and animals, the trees turned black and the air filled with foul smell.

A total of 3,787 deaths occurred immediately. Around 8,000 of the survivors died within two weeks and other 8,000 or more died from acute diseases caused due to the gas later.

Initial effects of exposure were –

Coughing

Severe eye irritation

Feeling of suffocation

Burning sensation in the respiratory tract

Blepharospasm

Breathlessness

Stomach pains

Vomiting

Primary causes of deaths were –

Choking

Reflexogenic Circulatory Collapse

Pulmonary Edema

Cerebral Edema

Tubular Necrosis

Fatty Degeneration of the Liver

Necrotizing Enteritis

The safety, health and welfare of the public is the most important point in every code of ethics. In case of Bhopal tragedy all of them were neglected. The poor quality of the facility and lack of many instruments were there as on for the leak. Two out of three main safety systems were unable to cope with the situations.

17

a)

Discuss the methods to improve collegiality and loyalty.

Collegiality

Collegiality is a kind of connectedness grounded in respect for professional expertise and in commitment to the goals and values of the profession. It is the tendency to support and cooperate with the colleagues.

Respect, commitment and connectedness are the elements of collegiality.

Respect

In general Means valuing one's colleague for their professional skill and their devotion to the social goods promoted by the profession. For engineering, It means affirming the worth of other engineers engaged in producing socially useful and safe products

Commitment:

Sharing devotion to the moral ideals essential in the practice of engineering. Even when there is cut-throat competition b/w engineers, there should be a feeling that all engineers share a concern for overall good to the society

Connectedness: Awareness of being part of a cooperative undertaking created by sharing commitments and skill

It means the sense of utility among engineers that includes cooperation and mutual support

Collegiality can be improved by

Help people achieve their goals.

Develop a genuine interest in every faculty member.

Treat people with respect and dignity—always.

Remember that relationships built on trust and fed by personal integrity are the foundation.

Recognize that poor behavior by others does not require you to respond in kind (but you do need to respond).

Model characteristics you wish the faculty and staff to exhibit.

Acknowledge that leadership is more a function of people's relationships than the position.

Recognize people publicly for their achievements.

Loyalty

The quality of being true and faithful in one's support

It is more a function of attitudes, emotions and a sense of identity

Senses of loyalty

Agency Loyalty

Identification Loyalty

Agency Loyalty

It is fulfill one's prescribed duties to an employer. The contractual duties may include particular task for which one is paid, general activities of cooperating with colleagues, and following lawful authority with the organization

It concerns with the matter of actions, whatever it motives. It is motivated by identification with the group to which one is loyal.

Example:

People may not like the job they do hate their employer, but still they would perform their duty as long as they are employees. This sense of loyalty is agency loyalty

Identification Loyalty

It is much concerned with attitudes, emotions, and a sense of personal identity as it does with action Employee should meet his moral duties to the organization willingly with personal attachment and affirmation.

Some of the duties of loyal employees are,

To avoid conflicts of interest

To protect confidential information

To be honest in making estimates

To admit one's error.

b)

The process of voluntary negotiations between the employers and a group of employees to resolve the conflicts is called Collective Bargaining.

1)Distributive Bargaining – In this, one party's gain is another party's loss. Example – Wages

2)Integrative Bargaining – In this, both the parties may gain or none of the parties may face a loss. Example – Better training programs

3)Attitudinal Structuring – When there is backlog of bitterness between both the parties then attitudinal structuring is required to make smooth industrial relations.

4)Intra-organizational Bargaining – There can be conflicting groups in both management and unions also. So, there is need to achieve consensus in these groups.

Process of collective Bargaining.

6 steps

Preparing for Negotiations

Identifying Bargaining Issues

Negotiations Procedure

Reaching the Agreement

Ratifying the Agreement

Administration of the Agreement

Objectives of Collective Bargaining

To increase mutual confidence between the employer and employees;

To regulate terms and conditions of employment without

Intervention of a third party;

To create cordial environment in the establishment;

To protect the interest of the employees; through collective action

And by preventing unilateral action on the part of the employer;

To raise the socio-economic attributes of the employees.

Advantages of Collective Bargaining

Effective in Protecting and Promoting Interests of Workers

Control of Management's Autocracy

Promotion of Durable Industrial Peace

Conducive to the Enhancement of Managerial Efficiency

Establishment of Industrial Rules and Creation of Labour Standards

18

a) What are occupational crimes ? Give example

Occupational crimes are defined as offenses that are committed by someone during the course of his or her employment.

Common Forms of Occupational Crime

Altering company records without authorization

Committing tax fraud

Money laundering

Misusing company data or property

Committing stock and securities violations

Types Of Crime :

Domestic crime Non-accidental crime committed by members of the family

Professional Crime When crime is pursued as a profession or day to day occupation

Blue collar crime (or) Street crime Crime against person, property .

Victimless crime Person who commits the crime is the victim of the crime.

E.g. Drugaddiction

Hate crime Crime done on the banner of religion, community, linguistics

People Committing Occupational Crimes Usually have high standard of education From a non-criminal family background Middle class male around 27 years of age (70% of the time) with no previous history No involvement in drug or alcohol abuse Those who had troublesome life experience in the childhood (Blum) People without firm principles (Spencer) Firms with declining profitability (Coleman, 1994)

b) How conflict can be managed in a workplace?

Conflict refers to any kind of opposition or antagonistic intersection between two or more parties.

If it is managed correctly, it can be helpful (functional) in meeting the organisational goals.

If it is mishandled or not managed correctly, it can be destructive (dysfunctional).

Causes of Conflict :

Unfamiliar language

Ambiguous or incomplete information

Organisational structure

Power struggles

Methods for Managing Conflict :

1. Collective Bargaining : Negotiations

2. Conciliation : Series of conferences, including informal sitting between representatives of the two parties

3. Mediation: Third party acts as a moderating influence on the two contending parties

4. Arbitration: A third person is chosen as the Arbitrator by agreement between the employers and employees

Methods for Managing Conflict

1. Preliminary step — knowing the conflict

2. Diagnosing the issue

3. Conflict Handling Modes

a. To avoid appearance of conflict

b. Not permitting conflict to surface

c. Mediation

d. Letting the parties in conflict to settle their scores

e. To solve the problems mutually

19

a) Computers with Internet raise a host of difficult moral issues, many of them connected with basic moral concerns such as free speech, privacy, respect for property, informed consent and harm.

Internet which is now a global network of networks, initially used the infrastructure of the telephone system and is now being handled by many telecommunication systems by wire, fiber or wireless systems.

The Internet provides a spring of new ways to be in contact with other people and with sources of information. It has also created greater convenience in ordering consumer items, paying bills and social experiments trading stocks and bonds. Like other major, it also has raised a host of new issues.

One set of issues centers on free speech, including control of obscene forms of pornography, hate speech, spam which is unwanted commercial speech and libel.

Computers contribute to greater centralization or decentralization insofar as human decision makers direct them.

There come issues which call for trouble wherein, computers are used in embezzlement and other forms of stealing money or financial assets. The issues concerning theft of software and information is again a similar one. The computers are centrally involved when an unauthorized person uses a telephone computer system to obtain private phone numbers or when maliciously alters or scrambles the programming of a telephone computer.

In today's world, malicious people have come up with not one but various ways of exploiting money, goods, services, assets, etc. through the computers and internet. The Internet besides easing our work has also paved way to gather an individual's confidential details easily.

The two main factors that make computers troublesome are their speed and geographical coverage, which allows the masses to be victimized further. The difficulty lies in tracing the underlying transactions to apprehend the thieves. This problem is compounded when the communication lines linking the computers involved cross national boundaries.

The most commonly discussed cases of computer abuse are instances such as –

The stealing or cheating by employees at work.

The stealing by non-employees or former employees.

The stealing from or cheating clients and consumers.

The violation of contracts for computers sales or services.

The many conspiracies to use computer networks to engage in widespread fraud.

Eg:

The hackers who crack the security and get unauthorized entry into the highly secured information zone, tend to copy the content or they may change the content, delete the content or get it affected with virus as soon as the authorized personnel opens the file.

Violation of copyright issues.duplicating copyrighted content without the author's approval,accessing personal information of others.

20

- a) Consulting engineer is an expert in the planning, design, and construction of both public and private infrastructures. The consulting engineering profession is aimed to benefit the whole of society, through the application of safer, cleaner, and more efficient foundations. With varied backgrounds, consulting engineers may have civil, structural, or mechanical and electrical expertise. Engagement of a consulting engineer is most advantageous when a project has a specific goal, or when expertise is needed to examine or solve a problem. In the building sector, the role of a consulting engineer is indispensable when development or performance is in question.

Consulting engineers are licensed professionals with diverse qualifications, including civil, structural, mechanical, electrical, environmental, geotechnical, chemical, industrial, and agricultural disciplines. At consulting engineering firms, teams of knowledgeable experts can fill many distinctive educational, technical, and mechanical roles that can help to solve or prevent any problems. Consulting engineers may design an entire project, or they might be responsible for only one component of the design, depending on the need. Their support can be provided throughout the whole process, from inception to completion, in order to facilitate the best solutions.

- b) Expert witness is a professional engineer who specializes in providing an expert opinion to clients. This person often has clients ranging from law firms to insurance companies. Most experts take on a neutral role when it comes to clients and can work for plaintiffs or defendants.

Some of the incidents that an engineering expert witness investigates for clients include train and automotive engineering defects as well as construction equipment accidents. The engineer may also get requests to review workplace accidents and industrial machinery injuries. One common accident that insurance companies retain these experts for is to figure out liability in slip and fall injuries involving sidewalks, stairs and escalators .

Services that an engineering expert witness can provide include determining the cause of an accident and providing a failure analysis report. Other options that an engineer expert has include creating engineering models and preparing simulations of accidents such as train or vehicle accidents
