Problems

100 turns carries a current of 10 A. Determine the

$$= NI$$

Establishes an MMF of 5000AT when carries a current of
number of turns of the winding.

$$MMF = NI$$

$$N = \frac{MMF}{I}$$

Problems

length 50cm is placed in a uniform magnetic field of it moves with a velocity of 50m/s. Determine the when angle between field and motion is

$$= Blv \sin \theta$$

Problems

length 60cm is placed in a uniform magnetic field of
an EMF of 2.5 V is generated across the conductor
perpendicular to the field, how much will be the
?

$$E = Blv \sin \theta$$

$$v = \frac{E}{Bl \sin \theta}$$

Problems

A conductor of length 1 meter is carrying a current of 100A and it is placed in a uniform magnetic field of 1.7Wb/m². If it is placed at an angle of 30° with respect to the field, what will be the force on the conductor?

$$F = BIl \sin \theta$$
