

TABULATION

INDUCTION MOTOR MODE

V_{dc}	I_{dc}	V_{ac}	I_{ac}	W	3 ϕ Power	Time for 10 rev	f_2	%Slip	Speed	Output	Input	η
V	A	V	A	W	W	s	Hz	%	rpm	W	W	%

INDUCTION GENERATOR MODE

V_{dc}	I_{dc}	V_{ac}	I_{ac}	W	3 ϕ Power	Time for 10 rev	f_2	%Slip	Speed	Output	Input	η
V	A	V	A	W	W	s	Hz	%	rpm	W	W	%

Note

- Wattmeter reading negative indicates induction generator mode.
- Since the supply frequency is usually slightly less than 50Hz, induction machine acts as generator even if the speed is less than 1000 rpm.
- Here, the dc generator is separately excited type; not self-excited.
