

Motor drawing an input of _____ W

$V = 400V$, $I_a = \underline{\hspace{2cm}} A$, $I_f = \underline{\hspace{2cm}} A$, $I_{amin} = \underline{\hspace{2cm}} A$

$\cos \phi = \frac{I_{amin}}{I_a} = \underline{\hspace{2cm}}$ Lead (/lag) (Note : under-excited $\rightarrow$ lag & over-excited $\rightarrow$ lead)

RESULT

3 phase synchronous machine was synchronized to the supply mains using bright lamp method and V-curves and inverted V-curves were plotted while the synchronous machine is working as generator and motor.
