

do not intersect (b)
 is never touch. ? has a minimum value

$$Q = 2L^{1/2} K^{1/2}$$

$$= 36 \quad Q = 60 \text{ units}$$

$$Q = 2 \times 36^{1/2} \times K^{1/2}$$

$$K^{1/2} = 60 / 2 \times 36^{1/2} = 5 \text{ units}$$

$$= 2 \times 36^{1/2} \times K^{1/2}$$

labours increased 10%.

$$\therefore L = 36 + \left(36 \times \frac{10}{100} \right) = 39.6 \text{ units}$$

for capital is kept constant.

$$\therefore \text{fixed variable proportion shows the } = \frac{63 - 60 \times 100}{60} \% = 5\%$$

while keeping the other factors constant.
