

## MPES (EE309)

- 1) Internal architecture of 8085 [Architecture, Explanation]
  - 2) Explain machine cycle and T state in 8085
  - 3) Explain different addressing modes in 8085 with examples
  - 4) Explain push and pop instructions of 8085 with example
  - 5) Timing diagram for instructions
  - 6) Explain machine cycle and instruction cycle and T state
  - 7) Explain CALL and RETURN instruction in 8085
  - 8) Write an ALP in 8085 to convert binary number to BCD number
  - 9) Explanation of ALP operation instructions
  - 10) Explain the various machine cycles of 8085
- 
- 11) Compare microprocessor and microcontroller
  - 12) Modes of operations of 8255
  - 13) Explain compiled, assembled, linked and loaded
  - 14) Challenges of embedded system
  - 15) Explain the interrupts in 8085 microprocessor

16) Water flow model [Explanation, Demerits] [Diagram]

17) Interfacing of ADC, DAC with 8085

III, IV

18) Embedded system [Explanation, Characteristics]

19) Hard and soft Real time systems

20) Block diagram of 8255

21) Explain the function of TMOD and TCON registers of 8051 microcontroller.

22) Architecture of 8051 [Architecture diagram, explanation]

23) Addressing modes of 8051 with examples

V, VI

24) DAC interfacing with 8051

25) Explain SFR registers in 8051 microcontroller

26) Different bit handling instructions in 8051

27) Explain assembly directives in 8051

28) List the various registers of 8051

29) Explanations of instructions in 8051

30) SCON and SBUF registers in 8051
