

IMPORTANT PORTIONS

Module 1

1. Architecture of 8085
2. Addressing modes of 8085
3. flag register
4. machine cycles and T states

Module 2

1. instructions-MOV, call, return,
2. stack related operations (PUSH and POP)
3. Delay calculation and program
4. lab experiments program-multiplication, ascending, descending

Module 3

1. interrupt and priority
2. 8255 programmable peripheral-block diagram
3. control word format of I/O and BSR mode
4. embedded system-hard and soft real time system
5. comparison microprocessor and controller
6. 8051 architecture
7. special function register
8. register organization of 8051

Module 4

1. addressing modes of 8051
2. data types and directives
3. I/O port programming
4. TMODE and TCON register

Module 5

1.interrupts of 8051

2.SBUF and SCON REGISTER

3.serial program

4.DAC and ADC interfacing
